Projects – Multiskilled Engineer (Fire Systems)

Senseco Systems Ltd has an opportunity to employ a Projects – Multi skilled engineer, to work within the Projects Team, based in Gillingham, Kent. Senseco has experienced a period of growth, and this role will complement the existing team.

Job Description:

- Installation and commissioning of small, and medium scale projects for both addressable, and non-addressable systems
- Commissioning will involve various manufacturers across both fire/security systems.
- The role will require reviewing specifications, associated drawings, documents and equipment to plan and ensure a smooth delivery of works carried out.
- Deliver an exceptional customer experience by providing an exemplary high standard of personal customer service.
- Ability to solve problems whilst building customer relationships.
- To identify and survey any sales opportunities from which you can earn personal reward.
- Undertake General administration relevant to your position including completing engineer's reports, timesheets and expenses in by required deadlines.
- Attend pre-booked appointments at times specified.
- Assist with other departments when required, for example assist with callouts as necessary from by the service desk.
- Inform the office immediately of any major system failures or site problems.
- Attend site in a professional and presentable manner and clean up any rubbish/debris following completion of your works.

Skills Requirements:

- Be able to update and maintain graphical user interfaces.
- Experience of working within commissioning teams, able to plan and communicate well with the team, suppliers and customers.
- Knowledge of carrying out both installations, and commissioning.
- Carrying out logical and accurate fault finding and diagnostics
- Understand the configuration programming to be able to comply with the commissioning strategy and methodology of systems being worked on
- A good understanding of installation/electrical procedures and principles related to the fire industry.
- Advanced level of experience working with Fire Alarm Systems
- FIA course 1, 2/3 and 6
- Sound knowledge on Kentec, Advanced and Morley systems, Gent, Ampac & Notifier would be an advantage.
